

Jansher Khan

Senior Full Stack Engineer · Python, React, AWS

Karachi, Pakistan · On-site or remote (US and EU overlap) · janshermarri@gmail.com · linkedin.com/in/jansher-khan-510301121 · github.com/janshermarri

SUMMARY

Senior full stack engineer with 7+ years building production web platforms in Python (Django, FastAPI) and React/Next.js on PostgreSQL and AWS. I build the app and run it: Docker, ECS, CI/CD, monitoring and cost control. Recent results: a billing platform that invoiced \$590K for 15 client organisations in six months, an AWS consolidation that cut the bill 81%, and tool-calling AI assistants on Azure OpenAI in production.

TECHNICAL SKILLS

- **Languages:** Python, TypeScript, JavaScript, SQL, Bash
- **Backend:** Django, Django REST Framework, FastAPI, Flask, Celery, SQLAlchemy, Alembic, Pydantic, Node.js, Express, REST APIs, WebSockets, multi-tenant SaaS
- **Frontend:** React, Next.js (App Router), Tailwind, PWA (service worker, web push), Astro, Expo / React Native
- **Cloud and DevOps:** AWS (ECS Fargate, EC2, RDS, S3, Lambda, API Gateway, ECR, IAM, CloudWatch, SSM, Cognito), Docker, GitHub Actions, CircleCI, Traefik, Caddy, Nginx, Linux
- **Data:** PostgreSQL, MySQL, Redis, Elasticsearch, Redshift, DynamoDB, Drizzle
- **AI:** Azure OpenAI and AI Foundry, Anthropic SDK, LangChain, tool-calling assistants, RAG, MCP; Claude Code as a daily engineering tool
- **Testing and observability:** pytest, Django test runner, Vitest, Playwright, Sentry, Prometheus
- **Payments and auth:** Stripe, Authorize.Net, PayPal, Microsoft Entra SSO (OIDC), JWT, AWS Cognito, Firebase

EXPERIENCE

Software Engineer (Full Stack, Python) — BillerBay

Remote (Lahore, Pakistan) · Jul 2024 – Present · Medical billing company

- Built BillerBay Invoicing from product requirements to production: Django REST backend and Next.js front end, 16 modules, 8 roles, append-only financial audit trail, 650+ automated backend tests; all 19 MVP must-haves delivered in June 2026.
- The invoicing module billed \$590K across 95 invoices in six months at an 84% collection rate and a 5-day average time to pay, serving 15 active client organisations.
- Integrated Stripe and Authorize.Net end to end, with reconciled gateway customers and refunds; \$493K collected in six months.
- Deployed the platform on AWS ECS Fargate (web, Celery worker and beat, migration task) with RDS PostgreSQL, ElastiCache, ECR and least-privilege IAM task roles.
- Measured the whole AWS estate for 14 days (0.61 vCPU average across 8 Fargate tasks, 5 RDS and 2 cache instances) and consolidated it onto one Graviton server plus one RDS instance: \$621 to about \$116 per month, an 81% cut.
- Built the Discharge Monitoring Report pipeline: Celery workers clean uploaded compliance data in the background and write it to PostgreSQL for the reporting dashboards.
- Shipped Microsoft Entra single sign-on (OIDC) and the executive dashboard: 12 KPIs, revenue and aging trends, gateway fees, days-to-pay, next-month forecast.

Data Engineer — TPLEX, for Secury

Karachi, Pakistan · Jun 2023 – Jun 2024

Contracted to Secury, a US K-12 web filtering and student safety platform.

- Migrated the production codebase from Python 2.7 to Python 3.10, retiring an end-of-life runtime.
- Built daily Python pipelines processing Secury's web-filter and activity logs, 1K to 500K records per run across Elasticsearch, Redis, Redshift and MySQL, and served client data requests across all four stores.

Software Engineer (Full Stack, Python) — One Technology Services

Karachi, Pakistan · Jan 2023 – May 2023

- Built Django and React features for a platform that monitors 5G and Wi-Fi network equipment and tracks its installation, with Mapbox site views.

Software Engineer (Full Stack, Python) — The Web Gateway

Karachi, Pakistan · Jun 2022 – Dec 2022

- Built a payment terminal in React, TypeScript and Firebase with Stripe and PayPal integrations.
- Built user management and authentication on AWS Cognito and Amplify; delivered a computer-asset register in Django and React.

Software Engineer — Doorstead

San Francisco, CA (Remote) · Feb 2021 – May 2022

VC-backed property-management startup; raised a Madrona-led \$12.5M Series A during my tenure, with 300+ properties and \$10M+ of rent under management.

- Built the APIs that ingest property-management data from Propertyware and the near-real-time sync that keeps platform data consistent with it, removing manual re-entry by the operations team.
- Set up CircleCI pipelines that run the test suite and deploy services automatically, supporting 4+ production deploys a week.
- Shipped backend and frontend features across internal tools and customer-facing products in Python (Flask), Node.js (Express) and React.

Software Engineer (Full Stack) — Visual Sparks Technologies

Lahore, Pakistan · Feb 2019 – Feb 2021

- Built the calendar, attendance and reporting modules of an HRMS product and Python backend features across the company's products.

SELECTED PROJECTS

- **MySchooli, school management SaaS (side business, live with real schools, 2025–).** Django with schema-per-tenant isolation (django-tenants), Celery, four Next.js apps (admin, parents, magic link, marketing), LangChain and Gemini features; self-hosted with Docker Compose, Traefik TLS and shared PostgreSQL and Redis.
- **Clinic Management System (own product, real customers, 2025–).** Django 5.2 and DRF with JWT role-based access, Next.js front end, PDF prescriptions and lab reports with WeasyPrint.
- **Order Processing System (freelance, paid, 2025–2026).** FastAPI, SQLAlchemy and Alembic, Celery, Next.js; 8-step order workflow with WebSocket status updates, Dockerised production behind Nginx.
- **Ledger, Tend and Compass (own, 2026).** Three Next.js 16 PWAs on Supabase and Drizzle with web push; "Aide", a tool-calling assistant on Azure OpenAI with a switchable Claude provider, reads and writes across all three; a Telegram agent on a self-hosted VPS answers from the same APIs.

EDUCATION

BS Information Technology — Bahria University, Lahore · 2015 – 2019

Currently on the Microsoft AI Engineer learning path (Azure AI Foundry); AI-103 certification planned.

Languages: English (fluent), Urdu (native)
