

Jansher Khan

Senior Full Stack Engineer · Python, React, AWS

Karachi, Pakistan · On-site or remote (US and EU overlap) · janshermarri@gmail.com · linkedin.com/in/janshermarri · github.com/janshermarri · janshermarri.github.io

SUMMARY

Full stack engineer with 7+ years of building production web platforms in Python (Django, FastAPI) and React/Next.js, on PostgreSQL and AWS. I build the app and I also run it: Docker, ECS, CI/CD, monitoring and the cloud bill. Most recently I built BillerBay's invoicing and payments platform, which billed \$590K in six months, and cut its AWS bill by 81%.

TECHNICAL SKILLS

- **Languages:** Python, TypeScript, JavaScript, SQL, Bash
- **Backend:** Django, Django REST Framework, FastAPI, Flask, Celery, SQLAlchemy, Alembic, Pydantic, Node.js, Express, REST APIs
- **Frontend:** React, Next.js (App Router), Tailwind, PWA (service worker, web push), Retool
- **Cloud and DevOps:** AWS (ECS Fargate, EC2, RDS, S3, Lambda, API Gateway, ECR, IAM, CloudWatch, Secrets Manager, Cognito), Docker, GitHub Actions, CircleCI, Traefik, Nginx, Cloudflare R2, Linux
- **Data:** PostgreSQL, MySQL, Redis, Elasticsearch, Redshift, DynamoDB
- **AI:** Azure OpenAI, Groq, Google Gemini, Anthropic SDK, LangChain, tool calling with provider fallback; Claude Code every day
- **Testing and observability:** Django test runner, pytest, Vitest, Sentry, PostHog
- **Payments and auth:** Stripe, Authorize.Net, PayPal, Microsoft Entra SSO (OIDC), JWT, AWS Cognito

EXPERIENCE

Software Engineer (Full Stack, Python) · BillerBay

Remote (Lahore, Pakistan) · Jul 2024 – Present · Medical billing company

- Built BillerBay Invoicing on my own, from requirements to production: Django REST and Next.js, 27 data models, 650+ backend tests.
- Over the last six months it billed \$590K across 95 invoices for 15 client organisations. Clients pay in about 5 days on average.
- Built our own checkout page for Stripe and Authorize.Net, with signed pay links, verified webhooks and a row lock so a card is never charged twice. \$493K came in through it in six months.
- Automated payment reminders: 8 email templates from before the due date to 19 days late, and the gateway is checked before each send so paid invoices are never chased.
- Added sales commissions on an append-only ledger, an audit trail that can't be edited, 9 roles and Microsoft Entra sign-in.
- Deployed it on ECS Fargate, then measured the whole AWS account for two weeks and moved it onto one Graviton server and one RDS instance: \$621 to about \$116 a month.

Data Engineer · TPLEX, contracted to Securly

Karachi, Pakistan · Jun 2023 – Jun 2024

Securly makes web filtering and student safety tools used in 20,000+ US schools.

- Built and ran the daily Python pipelines that processed Securly's web-filter and activity logs, 1K to 500K records a run, across Elasticsearch, Redis, Redshift and MySQL. They fed school activity reports, safety alerts and admin dashboards.
- Moved the codebase from Python 2.7 to 3.10. Runs got quicker and we saw fewer errors afterwards.

Software Engineer (Full Stack, Python) · One Technology Services

Karachi, Pakistan · Jan 2023 – May 2023

- Built Django and React features for a platform that tracks the installation of 5G and Wi-Fi network equipment, including the Mapbox views that show every site on a map.

Software Engineer (Full Stack, Python) · The Web Gateway

Karachi, Pakistan · Jun 2022 – Dec 2022

- Built a payment terminal app in React and TypeScript on Firebase, with Stripe and PayPal.
- Set up sign-up, login and user roles on AWS Cognito and Amplify, and built a computer-asset register in Django and React.

Software Engineer · Doorstead

San Francisco, CA (Remote) · Feb 2021 – May 2022

VC-backed property management startup; raised a \$12.5M Series A led by Madrona while I was there.

- Built the APIs that pulled property data in from Propertyware, plus a near-real-time sync that kept our platform matching it. The ops team stopped re-entering data by hand.
- Set up CircleCI to run the tests and deploy services automatically. We shipped to production four or more times a week.
- Built internal tools, some of them in Retool, and customer-facing features in Flask, Node/Express and React.

Software Engineer (Full Stack) · Visual Sparks Technologies

Lahore, Pakistan · Feb 2019 – Feb 2021

- Built the calendar, attendance and reporting modules of the company's HRMS product, and Python backend features across its other products.

SELECTED PROJECTS

- **Clinic OS, clinic management (own product, 2025–).** Two clinics run their day on it: 750+ appointments and 540+ new patients since August. Templates, quick phrases, prescriptions and invoices shared on WhatsApp through expiring links, patient uploads without login, a walk-in queue and 7 roles. Django REST, Next.js, Cloudflare R2.
- **Schooli, school management SaaS (co-founder, 2025–).** In use at schools. Django and Celery with four Next.js apps, self-hosted on Docker and Traefik. myschooli.com
- **Order Processing System (freelance, 2025–2026).** An 8-step order flow with purchase order and invoice PDFs, a task view for handlers and an insights page. FastAPI, SQLAlchemy with Alembic, Celery, Next.js, Docker, Nginx.
- **Ledger, Tend and Compass (own, 2026).** Three PWAs that share an assistant: it logs several expenses from one message or a receipt photo, and updates habits and goals. Tool calling across Azure OpenAI, Groq and Gemini, with automatic fallback. Tend is open source.

EDUCATION

BS Information Technology · Bahria University, Lahore · 2015 – 2019

On the Microsoft AI Engineer learning path (Azure AI Foundry); AI-103 planned.

Languages: English (fluent), Urdu (native)
